

The solution for
improving plastic
sheets and rigid
food packaging

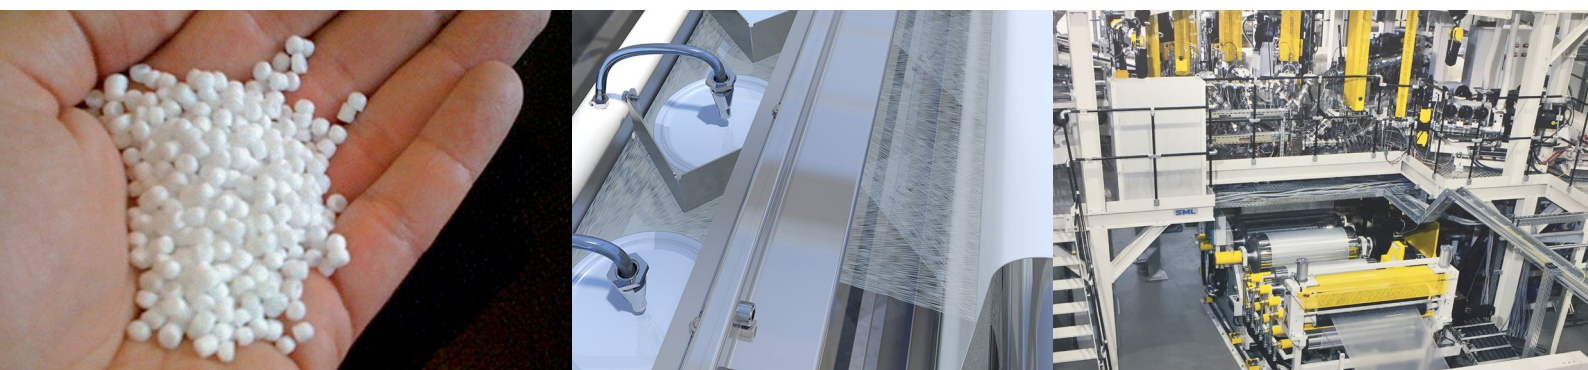

- Anti-block agents
- Anti-static agents
- Anti-fog agents
- Specialty fluids
- Polymer masterbatch

Long-term solutions and cost-performance additives

Discover how ideas become innovations

Our specialist expertise covers a range of technologies and processes, which enables us to work with our customers to create new and innovative products which result in differentiation within the markets we serve. Several types of anti-static, denesting and anti-fogging agents are based on functional chemicals and masterbatch additives, which are successfully used in plastic extruded rigid sheets, thermoformed trays, containers and food packaging.

Outperform your plastic with specialty fluids

The anti-static, de-blocking and anti-fogging agents are based on the following chemistry:

- Emulsions and concentrates
- Organo-modified compounds
- Oleochemicals
- Masterbatch additives

Specialty fluids have proven to be the best solution in cost-performance and are in line with the EU Directive Regulation (EU) No 10/2011 and its amendments, plastic materials and items intended to come into contact with food.

Available with a 'Dual use additive status', authorised at the same time as food ingredients. Specialty fluids are dedicated to coating stations like rotor spray systems, recommended by Weko.

Masterbatch for PET extrusion

A unique additive for PET instantly reduces surface friction without having any adverse effects on PET's physical properties.

It is designed as a slip additive, which decreases surface friction (COF) of food packaging.

The advantage of using a masterbatch additive is its crystal clear appearance.

Masterbatch additives are based on a compatible carrier with a fast migrating ingredient.

Masterbatches are successfully used for food packaging and extruded sheets, suffer no loss of performance and can resist a high melt temperature.

About Van Meeuwen

At Van Meeuwen we focus on cost-performance. We are motivated by creating profit for our customers.

Our family owned company, which was founded in 1934, entered the process additives market in the 1980's and has specialised in it ever since.

We also create custom made solutions if standard products are not performing sufficiently.
